

BETTER-LOOKING CROPS. BETTER-LOOKING YIELDS. ONE-OF-A-KIND NUTRIENT SOLUTION.

How B Sure® May Aid Your Crop's Quality And Yield Potential

No one offers a liquid nutrient solution like **B Sure**®. Derived from a unique microbial fermentation process, **B Sure** improves photosynthesis and plant metabolism, boosting plant pathways that are critical to its success. Plants respond with greater productivity, maximizing their potential in typical growing conditions as well as during times of heat, drought and other environmental stress.

B Sure contains carbon, nitrogen, true protein, amino acids and essential metabolic micronutrients. When applied to the crop or soil, **B Sure** interacts with the plant to increase crop productivity:

- The true protein is a source of highly bioavailable nitrogen that is released by the plant over time, complementing the activity of applied nitrogen
- The micronutrients help build and support an active photosynthetic pathway
- The carbon and essential minerals boost plant metabolism and stimulate plant growth, including root mass which promotes the uptake of available nutrients
- The free amino acids provide ready-made building blocks for protein synthesis

B Sure may be mixed with most fertilizers, micronutrients, fungicides, insecticides or herbicides. Please check with your local AMVAC® representative for specific mixing questions.

Type Of Application	pt/A	Timing
Foliar	2 - 4	From R1 though R5*

**With herbicides, insecticides, fungicides and foliar nutrition.*

To learn more, contact your retailer or local AMVAC representative.

B Sure is an approved Engenia®, Enlist One® and XtendiMax™ tank mix partner.
