

A FAST START AND A STRONG FINISH

How UpLift® May Increase Your Crop's Yield Potential

This nutrient-rich powder is derived from organic, biologically extracted chitin, nitrogen, amino acids and other critical nutrients. **UpLift®** promotes a robust soil microbial environment and rapid field establishment and strengthens the abiotic stress-response function so that crops start right and finish strong across a variety of field conditions.

The UpLift Difference

UpLift contains chitin, amino acids and other crucial nutrients that improve plant nutrition. When applied to the soil, **UpLift** interacts with the plants to increase crop productivity.

- Increased plant health and abiotic stress tolerance due to improved nutrition, which allow the plants to thrive within a variety of growing conditions
- Encourages stronger primary and secondary root development for faster field establishment and higher nutrient uptake
- Enhanced growth of chitinolytic soil microbes promotes a microbial environment more conducive to soil and plant health and strength

UpLift may be mixed with most fertilizers, micronutrients, fungicides, insecticides or herbicides. Please check with your local AMVAC® representative for specific mixing questions.

To Help Your Crop Start Fast And Finish Strong, Add UpLift To Your Program.

Type Of Application	lb/A	Timing
Soil	0.5 - 1	Every 3 to 4 weeks*

**From planting or transplant through harvest.*
