

BETTER-LOOKING CORN. IMPROVED CROP YIELD POTENTIAL. ONE-OF-A-KIND BIOLOGICAL SOLUTION.

Product Description

B Sure® is a liquid nutrient that mitigates abiotic stress (e.g., environment, nutrient, herbicide, etc.) and improves photosynthesis that supports grain fill. B Sure consists of shrimp protein hydrolysate that provides readily available plant nutrients to aid in plant efficiency, improving root growth and nutrient conditions for optimum yield.

Features

- Provides free amino acids that are used to build proteins needed for crop metabolism, growth, and reproduction
- OMRI approved for organic crop use
- Up to three-year shelf stability
- Tank-mix compatibility with fungicides, insecticides, herbicides, or nutritional products
- Provides amino acids that support key crop functions (e.g., reproduction, recovery, stress management) and protects crop from abiotic stress brought on by tough environmental conditions

Key Benefits

- Mitigates stress that leads to yield loss
- Reduces crop recovery time following herbicide application
- Increases crop yield potential
- Can improve test weights and grain fill when applied at reproductive stage with fungicide

Application Timings/Rates

- B Sure use rate: **1-2 pints per acre per application**
- Application timings:
 - V3 to V5 (with herbicides)
 - VT to R1 (at tassel)
- Tank mix with fungicide, insecticide, herbicide, or nutritional products
- Recommended to include non-ionic surfactant at 0.25% v/v if applied alone

Yield Data

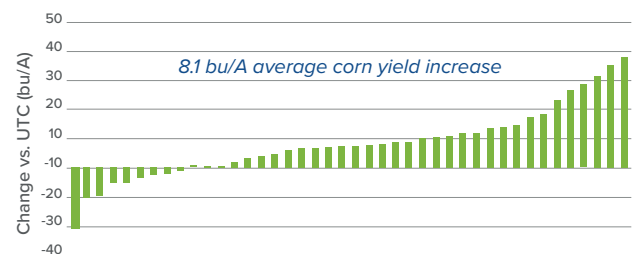

Figure 1. N = 42 observations from third-party trials. All rates, application methods, and timings. Bu/A change in corn yield vs. nontreated. Reported here are all B Sure rates, treatment combinations, and tank mixes reported in these studies unless directed comparisons to a control were not possible.
