

HERBICIDE USE GUIDELINES WITH COUNTER® 20G INSECTICIDE

AMVAC® has a full line-up of systemic and non-systemic granular soil insecticides to meet the specific growing conditions and needs for the acres you farm.

AZTEC®, SmartChoice® and COUNTER® brand insecticides contain an organophosphate (OP) insecticide class of chemistry.

AZTEC and SmartChoice are non-systemic, controlling below ground insects without negative interaction with either soil-applied or postemergence corn herbicides.

The OP chemistry in **COUNTER 20G** is unique, featuring systemic and contact activity that controls insects above ground as well as below ground early season insects and

nematodes residing in or on the corn plant. Neither seed treatments nor traits can deliver the level of control or pest spectrum that **COUNTER 20G** provides.

However, this systemic nature creates the potential for interaction with certain herbicides resulting in labeled herbicide use restrictions in corn.

While it is important to manage your herbicide program carefully when using **COUNTER 20G**, many corn herbicides may be safely applied prior to or following **COUNTER 20G** at-planting. Always read and follow the **COUNTER 20G** product label before applying. Refer to the use recommendations and labeled restrictions on any corn herbicides.

Corn herbicides at timings listed below, may be used with COUNTER 20G applied at-plant¹:

Corn Herbicide	EPA Reg No	Timing	Corn Herbicide	EPA Reg No	Timing
Acuron®	100-1466	PP/PRE	Harness® Xtra	524-480	PP/PRE/POST

¹These lists are not inclusive of all corn herbicides or application timings. Read and follow label restrictions of any herbicide before using in conjunction with COUNTER 20G at planting. Interactions of certain herbicides with COUNTER 20G may occur under adverse growing conditions which can cause significant injury to corn. Labels can be found at the manufacturer's websites. For more information about COUNTER 20G use with corn herbicides, contact your local agricultural chemical retailer or AMVAC representative at 1-888-462-6822, or visit AMVAC.com. (PP – preplant, PRE – preemergence, POST – postemergence)

Potential Herbicide Interactions With COUNTER 20G At-Plant

Significant corn injury may result from COUNTER 20G use with select corn herbicides. Avoid using the herbicides and application timings below if COUNTER 20G (terbufos) was applied at-plant:

- mesotrione – applied postemergence
- saflufenacil – applied 30 days or less preplant
- ALS inhibitors (HRAC¹ group 2) – Do Not Use.
 - Examples: flumetsulam, halosulfuron, nicosulfuron, primisulfuron, prosulfuron, rimsulfuron, thiencazabone-methyl or thifensulfuron

COUNTER 20G may be safely applied to corn 7 days after postemergence application of:

- mesotrione
- ALS inhibitors (HRAC group 2).

Impact[®] Herbicide, ImpactZ[®] Herbicide, Impact Core[®] Herbicide and Sinate[®] Herbicide **MAY BE USED** in conjunction with **COUNTER 20G** or any soil insecticide without corn injury.

DO NOT use corn herbicides at timings listed below, with COUNTER 20G applied at-plant²:

Corn Herbicide	EPA Reg No	Timing
mesotrione		Post
saflufenacil		30 days PP or less
ALS inhibitors (HG 2)		PP/PRE/POST
