

# POSTEMERGENCE WEED CONTROL IN A GLYPHOSATE-TOLERANT SOYBEAN PROGRAM

## Classic® Herbicide Delivers:

- Improved postemergence control of key weeds such as morningglory, hemp sesbania, yellow nutsedge, dandelion and velvetleaf when compared to using glyphosate alone.
- Residual activity to help keep fields clean.
- Excellent tank-mix partner with other postemergence soybean products to expand the weed control spectrum.

## Rate Recommendation

- **Classic** 0.25–0.33 oz/A + glyphosate.

## Application Information

- For best control of morningglories and dandelion, a higher rate of **Classic** is recommended.
- Refer to the glyphosate label for specific ammonium sulfate and adjuvant recommendations.
- **Classic** may be applied anytime after the first trifoliolate has opened but no later than 60 days before soybean maturity.

### Weeds Controlled by Classic 0.25–0.33 oz/A<sup>1</sup> + Glyphosate<sup>2</sup>

Weeds	Maximum Height (in inches)	Weeds	Maximum Height (in inches)
Barnyardgrass	6	Panicum: Fall, Texas	10
Cocklebur	8	Pigweed: Redroot, Rough	12
Corn, Volunteer	20	Pigweed, Other	8
Crabgrass Species	10	Ragweed: Common, Giant	8
Dandelion	4	Sesbania, Hemp	4
Foxtail Species	10	Sicklepod	4
Jimsonweed	10	Teaweed (Prickly Sida)	4
Ladysthumb	8	Signalgrass, Broadleaf	4
Lambsquarters	6	Smartweed, Pennsylvania	8
Morningglory: Entireleaf, Ivyleaf, Pitted, Tall	4	Spiderwort, Tropical <sup>3</sup>	2
Nightshade, Eastern Black	5	Sunflower	8
Nutsedge, Yellow	6	Velvetleaf	4

<sup>1</sup>Classic will not control ALS-resistant weeds.

<sup>2</sup>Equivalent of 1 qt/A of 4 lb/gal glyphosate.

<sup>3</sup>Classic at 0.5 oz/A + glyphosate will suppress tropical spiderwort that is no larger than 2 inches in size.
