Are slugs becoming a pain in your grass?

Apply Deadline® M-Ps and Durham® to protect your grass seed crops. Deadline M-Ps has a superior slug attractant system (DB27), doesn't dissolve easily, is long-lasting in the field and the formulation also inhibits mold growth. Durham's smaller granules contain 5 times as many bait particles as other brands, controls on contact and are especially effective because angleworms and night crawlers aren't attracted to it. With these great products from Amvac you have two of the best solutions available for slug control.
