

PARAZONE[®]

3SL Herbicide

Proven Performance for Soybean Harvest Aid

ParaZone[®] 3SL Herbicide from AMVAC[®] — Prime your soybeans for a timely harvest:

ParaZone 3SL is an excellent option for desiccation of soybeans to hasten maturity and allow for an earlier harvest.

ParaZone 3SL offers flexible rates and can be applied by air or ground equipment. ParaZone 3SL will also have some activity of weeds that may be present at application.

ParaZone 3SL does not contain an adjuvant system. Adjuvant recommendations can vary depending on environmental conditions.

Talk to your AMVAC Rep, Ag Retailer or Crop Advisor for local ParaZone 3SL use recommendations.

Rate and Application Directions USE RATE PER ACRE — 5.4 - 10.7 fl oz

Apply specified rate in a minimum of 20 gallons of spray per acre by ground or 5 gallons of spray per acre by air.

On indeterminate varieties, apply when at least 65% of the seed pods have reached a mature brown color or when seed moisture is 30% or less.

On determinant varieties, apply when plants are mature, i.e., beans are fully developed, 1/2 of leaves have dropped, and remaining leaves are yellowing. Immature soybeans will be injured. Use the higher rate for cocklebur control. Mature cocklebur, especially drought-stressed plants, are tolerant to ParaZone 3SL and desiccation will not be complete.

Use Restrictions – Soybeans

- Do not apply within 15 days of harvest.
- Do not make more than 3 applications per year.
- Do not graze or harvest for forage or hay.

ParaZone 3SL – Key Features and Benefits

- Labeled for pre-plant use on more than 100 listed crops
- Proven formulation of paraquat containing 3.0 lb ai/gal
- Excellent mixing characteristics
- Outstanding solution for weed resistance management – Group 22 herbicide
- Rapidly adsorbed by plant foliage, ParaZone 3SL is rainfast in 30 minutes
- Use alone, in tankmixes or as component in planned programs
- Available in 2 x 2.5 gallon cartons and in 265 gallon minibulk
